

INTRODUCTION

Holland Alma Kft. Hungarian tree nursery has a history of more than 20 years. It is one of the major nurseries in Central Europe which plays key role in the fruit propagation material production sector with its stable operation.

FIELDS OF ACTIVITIES

Our site in Csobád is situated in an exceptional ecological environment for the nursery production. The soil that has not been used for nursery before is a silty soil of Hernád stream with high humus content, good nutrition supply and good water drainage. It provides a good basis for the excellent preparation of grafts. Soil conditions provide an extremely good root formation.

Our range of activity along with the production and sale of high-quality virus-free propagation material (grafts) includes consultancy as well.

Holland Alma Kft. offers an excellent opportunity of environment-friendly and bio activity for fruit growers by focusing on disease resistant, new, fresh apple varieties as well as by purchasing exclusive propagation and distribution licence rights and creating Naturalma® brand.

MARKET

Our products, besides the Hungarian market, are also popular in the European countries, and our export activity covers Ukraine, Russia and some countries of Eurasia.

INNOVATION

Our nursery collaborates and works in close relationship with several European research and breeding institutes, training and development centers and nursery groups.

MISSION

Our purpose is to provide long-term, stable and predictable activities to growers, so they can offer healthy products for customers along with environment-friendly and rentable production.
